

Aluminium **Shutters**

SUNFLEX

Sunflex Shutters

A high quality, locally produced and beautiful aluminium shutter that has fantastic light and privacy control characteristics as well as being an excellent security barrier. A great choice for external openings, humid environments as well as those openings that require extra security.

Using only the best materials available and with an eye for detail that is renowned in the industry – **Sunflex Shutters** will add style, safety and peace of mind to any property. Due to these high levels of material spec – the shutters are all weather, all purpose and have a guarantee for peace of mind. No longer does security have to come at the expense of beauty – **Sunflex Shutters** will provide the needed peace of mind whilst enhancing any room in your house.

Track Systems

Our top hung wheel running track systems are used primarily for doors and wide openings. These beautiful systems have no limitation on overall width or any stacking limitations. You can chose between a system that is fully floating or multi directional opening shutter panels, as well as inward or outward opening panels, according to your layout and design. With a security rating for panel widths up to a maximum of 900mm wide, our track systems offer you a beautiful and safe patio enclosure.

Hinge Systems

Used primarily for windows, our side hung hinge systems all come with a superior architrave finish around your reveals, as standard. These systems can open 180 degrees back out onto the walls with a maximum panel number of 4. This is further restricted to 2 panels per side, to ensure the weight of your shutter panels does not effect the side mounted hinges. Very few windows are wider than 2400mm, but should you require a wider system, we can seamlessly change between track and hinge to ensure your windows and doors are always secured, while also having a superior finish.

Affiliated to the Security Association of South Africa.

Locally manufactured with short lead times.
